

ECO 301: Money and Banking
In-class Exercise: Money Multiplier

Name: _____

Directions: Work in groups of up to four people and answer the following questions. All papers will be collected, but only one member's paper will be randomly selected and graded and all members of the group will receive the same grade.

By signing below, you agree that the following work represents the efforts of everyone in the group, and you are willing to accept as your own grade for the group project the grade earned from this representation of your group's work. Every member must agree to these terms to earn a non-zero grade for this assignment.

_____ Signature Group Member 1	_____ Print Name	_____ Date
_____ Signature Group Member 2	_____ Print Name	_____ Date
_____ Signature Group Member 3	_____ Print Name	_____ Date
_____ Signature Group Member 4	_____ Print Name	_____ Date

1. Suppose the required reserve ratio is 2%, banks hold an extra 3% of deposits in excess reserves, and consumers hold currency balances that are about 10% of what they hold in deposits in banks. Suppose the Fed makes an open market sale of \$150 million of government bonds.

(a) Compute the impact on the monetary base.

(b) Compute the impact on the M1 money supply.

(c) Compute the impact on the amount of deposits held in the banking sector.

(d) Compute the impact on required reserves, excess reserves, and total reserves held by banks.

(e) Describe and illustrate the impact on the equilibrium interest rate.

2. Suppose the required reserve ratio is 5%, banks hold an extra 10% of deposits in excess reserves, and consumers hold currency balances that are about 5% of what they hold in deposits in banks. Suppose there is \$500 billion of currency in circulation and \$3 trillion in total reserves.

(a) Compute the quantity for monetary base.

(b) Compute the M1 money supply.

(c) Compute the amount of deposits held in the banking sector.

(d) Compute the amount of required reserves, excess reserves, and total reserves held by banks.

4. Suppose an increase in computer financial technology causes consumers to decrease the amount of money they hold in currency from 5% of the amount they hold in deposits to 1%. The monetary base is \$650 million, the required reserve ratio is 3% and banks hold an extra 2% of deposits in excess reserves.

(a) Compute the M1 money supply before and after the change in currency holdings.

(b) Compute the amount of deposits held in the banking sector before and after the change in currency holdings.

(c) Compute the amount of required reserves, excess reserves, and total reserves before and after the change in currency holdings.

(d) Describe and illustrate the impact on the equilibrium interest rate.
