

# Monetary Policy

ECO 120: Global Macroeconomics

# Goals

1 / 30

- Specific Goals

- Describe the Federal Reserve System and the tools they use to conduct monetary policy.
- Identify factors that affect money demand.
- Describe and illustrate how changes in money supply affect interest rates, inflation, and real GDP in the short run and long run.
- Ultimate goal: Be able to evaluate an economy's performance and suggest appropriate monetary policy.

- Learning Objectives

- LO1: Apply the supply and demand model to predict quantity and price outcomes of a number of different markets.
- LO5: Use the model of aggregate demand and supply to evaluate the short-run and long-run impacts of fiscal and monetary policy on production, employment, and the price level.

## Reading and Exercises

2 / 30

- Supply and demand for money: Module 40
- Monetary Policy and AS/AD: Module 41
- **Canvas Quiz due Wednesday 11:59 PM.**  
Multiple-choice, 10 questions, unlimited attempts allowed, only best score counts
- **Homework/In-class Exercise due Friday 11:59 PM.** We will work together in class on Thursday.

## Reading and Exercises

2 / 30

- Supply and demand for money: Module 40
- Monetary Policy and AS/AD: Module 41

# What is money?

3 / 30

- Money is a commodity or token that is generally acceptable as a means of payment.
- **Fiat currency:** Currency with no inherent value
  - Today the U.S. dollar is a fiat currency.
  - In prisons cigarettes are sometimes used as money. Cigarettes have an inherent value.
  - From 1889-1932 and from 1946-1971 the U.S. would redeem dollars for gold (Gold Standard).
  - Since the late 1970s most world currencies are fiat currencies.
- Money has three important functions:
  - Medium of exchange
  - Unit of account
  - Store of value.
- **Legal tender:** Government recognized currency to be widely used for payments, and is accepted for payments to the government taxes, fees, payments for services, etc.

# What is money?

## Functions of money

4 / 30

- Medium of exchange: eliminate the need for a double coincidence of wants.
- Unit of account: an agreed measure for stating the relative prices of goods and services.
- Store of value:
  - Money can be held and used for later consumption.
  - Money is not unique in this aspect. Stamps, baseball cards, houses, even computers and TV's can be stores of value.
  - With inflation, the value of money falls. Therefore currencies that undergo hyper-inflation cannot meet this function.

## Official Measures of money

5 / 30

- Two primary forms of money: Currency and Deposits.
- Two measures of money called **M1** and **M2**
- M1: currency + demand deposits (eg: checkable deposits) + other liquid deposits (eg: savings accounts).
  - These are immediate means of payment
- M2: M1 + time deposits + money market mutual funds.
  - The additional items in M2 can *quickly* be converted into a means of payment.
- **Liquidity**: the property of an asset being quickly converted to a means of payment.

# Official M1 Measures of Money

# Official M2 Measure of Money

7 / 30

# Forms of Payment

8 / 30

- Checks: Contracts to pay on demand deposits held in a bank or financial institution.
  - Checks are not money, but the balance of demand deposits is part of M1
- Debit cards: Look like credit cards but function as checks with greater speed, pay deposits held in a bank to a merchant
- Credit cards: Loans from a financial institution to pay to a merchant.
  - Credit cards aren't money, but each transaction *eventually* involves multiple transactions involving money.
  - When you pay with a credit card don't give the merchant money, the credit card company does.
  - Then after some time, you give the credit card company money to pay back the loan.

# Modern Forms of Payment

9 / 30

- Payment apps such as Apply Pay, Google Pay, Venmo: Function like debit cards, connect your checking account information to the app.
- ACH transactions (Automatic Clearing House): Electronic transactions in and out of checking or savings accounts
- E-money such as Bitcoin. Is it money?
  - Electronically-defined asset with limited quantity
  - (1) Medium of exchange, (2) store of value, and (3) unit of account
  - Legal tender in El Salvador and Central African Republic
  - It's not a U.S. official measure of money
  - It's not something under direct control of U.S. central bank

# Modern Forms of Payment

  - Legal tender in El Salvador and Central African Republic
  - It's not a U.S. official measure of money
  - It's not something under direct control of U.S. central bank

# Modern Forms of Payment

9 / 30

- Payment apps such as Apply Pay, Google Pay, Venmo: Function like debit cards, connect your checking account information to the app.
- ACH transactions (Automatic Clearing House): Electronic transactions in and out of checking or savings accounts
- E-money such as Bitcoin. Is it money?
  - Electronically-defined asset with limited quantity
  - (1) Medium of exchange, (2) store of value, and (3) unit of account
  - Legal tender in El Salvador and Central African Republic
  - It's not a U.S. official measure of money
  - It's not something under direct control of U.S. central bank

# What is the Federal Reserve?

10 / 30

- The Federal Reserve, aka the **Fed**, is the United States's central bank.
- A central bank is a bank for the banks.
- Overnight band lending/borrowing: Financial institutions often use overnight loans to borrow funds from the Fed or from other banks in order to meet their depositors' demands for their money.
- Regulate the country's depository institutions
- Influence interest rates, inflation rates, real GDP, unemployment, etc.

# What is the Federal Reserve?

10 / 30

- The Federal Reserve, aka the **Fed**, is the United States's central bank.

# Overnight Lending and Borrowing

11 / 30

- **Federal funds lending:** When financial institutions make overnight loans to each other (nothing to do with funds that are federal or from the Federal Reserve)
- **Federal funds rate:** The interest rate that financial institutions charge each other for overnight loans. As of November 28, 2023, the federal funds rate is in the range 5.25% to 5.50%.
  - The federal funds rate is a *private market rate*. The Fed *influences* it, but doesn't set it.
- **Discount window borrowing:** When financial institutions can borrow directly from the Federal Reserve (used to do it at a "Discount Window" at the Federal Reserve Bank of New York).
- **Discount rate:** Interest rate that the Fed charges banks for overnight loans (ironically not at a discount)
  - The Fed does set the discount rate

# Overnight Lending and Borrowing

## Reserves and Interest on Reserves

12 / 30

- Banks hold a fraction of their total deposits **on reserve**, lend out the rest.
- Reserves could be vault cash, but most is held electronically in **reserve accounts** at the Federal Reserve.
- The Fed used to have *reserve requirements*: banks were required to keep a minimum percentage of deposits on reserve
- **Interest rate on reserve balances**: Since October 2008, the Fed pays banks interest on funds held in reserve accounts
- Since 2020, the Fed no longer has a reserve requirement, because with the ability to earn interest, banks keep large amounts of funds on reserve

## Reserves and Interest on Reserves

12 / 30

- Banks hold a fraction of their total deposits **on reserve**, lend out the rest.

# Structure of the Federal Reserve

13 / 30

- Board of governors.
  - Seven members appointed by the president and confirmed by the senate.
  - Each has a 14 year term. A new seat comes up every 14 years.
  - One chairman with a 4 year renewable term.
- Federal Reserve Districts
  - Twelve Federal Reserve Districts, each with a Federal Reserve district bank.
  - Federal Reserve District banks are non-profit, private (non-government) institutions.
  - New York Fed implements monetary policy.

# Monetary Policy

17 / 30

- **Monetary policy:** When the central bank changes interest rates or the quantity of money in order to achieve macroeconomic objectives
- Federal Reserve System Mandate: *Promote effectively the goals of maximum employment, stable prices, and moderate long-term interest rates*
- Primary monetary policy tool: Interest on reserve balances
  - Suppose Fed pays higher interest on reserve balances
  - Banks will charge higher rates for loans
  - Banks are willing to pay higher interest rates on deposits
  - Leads to a general increase in interest rates throughout the economy
- Open market operations
  - Fed owns U.S. government securities
  - What would happen if the Fed sold some of these securities?
  - This exchange takes money out of the economy, and more bonds into the economy

# Monetary Policy

## Real vs. nominal money

18 / 30

- **Nominal money:** quantity of money measured in dollars.
- **Real money:** real purchasing power of money.

$$\text{Real money} = \frac{\text{Nominal money}}{\text{Price level}}$$

- What should we use as a price for real money?
- When interest rate increases, opportunity cost of holding money increases, quantity of money demanded decreases.
- When interest rate increases, people decide to hold more of their financial wealth in interest-bearing assets instead of money.

## Real vs. nominal money

18 / 30

- **Nominal money:** quantity of money measured in dollars.
- **Real money:** real purchasing power of money.

$$\text{Real money} = \frac{\text{Nominal money}}{\text{Price level}}$$

# Real money demand

# Determinants of Money Demand

20 / 30

- When something *besides the interest rate* affects money demand, this shifts the money demand curve.
- Real GDP: Increases in income lead to an increase, rightward shift, in the money demand curve.
- Financial innovations make holding on to money less necessary, leading to a decrease, leftward shift, in money demand.
  - Examples: ATM's, online banking, automatic transfers between checking and savings accounts, credit and debit cards.
  - People can hold more of their financial wealth in interest-bearing financial investments, and quickly transfer to money to make a purchase.

# Determinants of Money Demand

20 / 30

20 / 30

- When something *besides the interest rate* affects money demand, this shifts the money demand curve.
- Real GDP: Increases in income lead to an increase, rightward shift, in the money demand curve.
- Financial innovations make holding on to money less necessary, leading to a decrease, leftward shift, in money demand.
  - Examples: ATM's, online banking, automatic transfers between checking and savings accounts, credit and debit cards.
  - People can hold more of their financial wealth in interest-bearing financial investments, and quickly transfer to money to make a purchase.

# Shifts in money demand

21 / 30

# Money Supply

22 / 30

- Federal Reserve determines nominal money supply.
- What about real money supply?
- In the short run the price level is fixed, so the real money supply moves with the nominal money supply.
- Money supply curve is vertical.

# Money Supply

22 / 30

- Federal Reserve determines nominal money supply.
- What about real money supply?
- In the short run the price level is fixed, so the real money supply moves with the nominal money supply.
- Money supply curve is vertical.

# Money Supply

22 / 30

- Federal Reserve determines nominal money supply.
- What about real money supply?
- In the short run the price level is fixed, so the real money supply moves with the nominal money supply.
- Money supply curve is vertical.

# Money Supply

22 / 30

- Federal Reserve determines nominal money supply.
- What about real money supply?
- In the short run the price level is fixed, so the real money supply moves with the nominal money supply.
- Money supply curve is vertical.

# Money market equilibrium

23 / 30

# Monetary policy

24 / 30

## Contractionary Monetary Policy

- A decrease in money supply
- Fed conducts an open market \_\_\_\_\_ of bonds
- Shifts money supply left
- Leads to an increase in the interest rate

## Decrease in Money Supply

# Monetary policy

25 / 30

## Expansionary Monetary Policy

- An increase in money supply
- Fed conducts an open market \_\_\_\_\_ of bonds
- Shifts money supply right
- Leads to a decrease in the interest rate

## Increase in Money Supply

## Ripple effects of the interest rate

26 / 30

Suppose the Fed decreases interest rates.

- 1 Investment increases.
- 2 Consumption increases.
- 3 Net exports increase.
  - What happens to demand for dollars vs. other currencies?
  - Lower return in the U.S., lower demand for dollars.
  - Value of the dollar falls.

## Ripple effects of the interest rate

26 / 30

Suppose the Fed decreases interest rates.

- 1 Investment increases.
- 2 Consumption increases.
- 3 Net exports increase.
  - What happens to demand for dollars vs. other currencies?
  - Lower return in the U.S., lower demand for dollars.
  - Value of the dollar falls.

## Ripple effects of the interest rate

26 / 30

Suppose the Fed decreases interest rates.

- 1 Investment increases.

- Decrease money demand.

## Reading and Exercises

30 / 30

- Supply and demand for money: Module 40
- Monetary Policy and AS/AD: Module 41
- **Canvas Quiz due Wednesday 11:59 PM.**  
Multiple-choice, 10 questions, unlimited attempts allowed, only best score counts
- **Homework/In-class Exercise due Friday 11:59 PM.** We will work together in class on Thursday.
