

- 1 There is there is an increase in global energy costs which makes it more expensive to run factories and employ manufacturing workers.
- 2 There is a tax cut to businesses on proprietorship income and corporate revenue (i.e a decrease in taxes on income earned by businesses).
- 3 An increase in stock market values results in an increase of wealth for consumers, leading to an increase in demand for final goods and services.
- 4 A decrease in immigration leads to both fewer workers entering the labor force and a decrease in demand for final goods and services.
- 5 More two-parent families decide to have only one member of the household participate in the labor force, rather than both parents.
